DETAILED ACTION

Introduction

1. This office action is in response to request for continued examination filed 5/6/09, and applicant's claims/submission filed 2/24/09. Claims 1-7, 9, 10, 14-25, and 31-34 are currently pending and have been examined. Applicant's recent IDS filed 12/24/08, 1/19/09, 3/30/09, and 5/9/09 have been considered. There is no claim to foreign priority.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/24/2009 has been entered.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

The instant application is deemed to be directed to a non-obvious improvement over the invention patented in Yamakita (US Patent No. 5,956,681) in view of Szabo (US 6,868,525), and further in view of Butler et al. (US 7,082,392), and further in view of Haley (US 6,950,831, and further in view of Fortescue et al. (Fortescue, US 6,975,983). Yamakita teaches input mode bias for an input field, containing a schema registry and a grammar database. Szabo teaches a hierarchical schema registry. Butler teaches having a language setting and locale setting for entry text. Haley teaches having a mark-up language schema registry. and Fortescue teaches a plurality of grammars comprising a union of data from a plurality of user data sources.

The Yamakita alone or in combination with Szabo, Butler, Haley and Fortescue do not teach or make obvious:

Regarding claim 1, "a mark-up language schema registry in communication with the application, wherein the mark-up language schema registry comprises a schema database and a grammar database, wherein the schema database comprises a plurality of schema names and a

plurality of pointers to the grammar database associated with the plurality of schema names, the grammar database comprising a plurality of grammars, wherein the plurality of grammars comprise a **first grammar** associated with a **union** of **data from a plurality of user data sources**, the **union of data from the plurality of user data sources** being a **context free grammar** built from a **union** of a **contacts list**, a **global address book**, and a **list of first and last names**; and

an input engine in communication with the mark-up language schema registry, wherein the **mark-up language schema registry** is configured to:

receive a schema name **based on a hierarchical analysis of a textual input** to the **input field** from the application,

locate a corresponding grammar from among the plurality of grammars comprising one of: a regular expression and a statistical language model, the **corresponding grammar having a language setting and a locale setting**, and the corresponding grammar being associated with the schema name, and

send the corresponding grammar to the input engine, wherein the **corresponding grammar defines an appropriate input for the input field**, and wherein the schema in the mark-up language schema registry is

associated with the corresponding grammar by one of: referring to the corresponding grammar directly, mapping to the corresponding grammar, and encoding the corresponding grammar within the schema.”

Regarding claim 20, the non-obvious improvement comprising, **“dynamically generating a plurality of grammars**, wherein the plurality of grammars are used to define an appropriate input for the input field, each mark-up language schema in the registry is associated with a corresponding grammar, and encoding the corresponding grammar within the schema, and wherein the plurality of grammars comprise: **a first grammar associated with a union of data from a plurality of user data sources, the union of data from the plurality of user data sources being a context free grammar built from a union of a contacts list, a global address book, and a list of first and last names**, a second grammar built exclusively from a contents list of the contacts list, a third grammar built exclusively from a contents list of the global address list, a fourth grammar associated with regular expressions, and a fifth grammar associated with statistical language models.”

Regarding claim 21, the non-obvious improvement comprising, **“dynamically generating a plurality of grammars** based on the input field

and a mark-up language schema registry, wherein the plurality of grammars comprise: a first grammar associated with a **union of data from a plurality of user data sources**, the **union of data from the plurality of user data sources being a context free grammar built from a union of a contacts list, a global address book, and a list of first and last names.**

4. Claims 2-7, 9, 10, 14-19, 22-25, and 31-34 are allowed as they further limit their parent claims or their independent claims, which have been deemed allowable.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Rodriquez et al. (US 6,304,354) teaches a centralized unified data store used for supporting end users in marketing, the components gathered from multiple data sources.
- Haddad (US 2002/0111928) teaches recipient information such as name, address, and contact information in an input field application.
